How to Order

- **Lead wire length**
  - Nil 0.6 m
  - X202 5 m

- **Unit specifications**
  - Nil With the unit switching function
  - M Fixed in SI unit (MPa)

Note) With unit switching function is not permitted to sell for the domestic use in Japan, because the new Weight and Measure Act has been implemented since October '99.

Accessory

**Series GS40**

### Precautions

**Warning**

1. Remove energy source from the switch while wiring. When it is short-circuited, built-in micro-computer receives damage.
2. If the black wire (output wire) comes in contact with the power supply or is shorted, the built-in output transistors will burn out, leading to malfunction.
3. Do not apply tensile power to the power cord. This will cause damage.
4. Maximum allowable load current is 80 mA. Be sure to not exceed 80 mA.

**Caution**

1. Internal circuit and example of wiring

![Circuit Diagram]

Brown wire—Connect to DC source (+) (positive) to enable switch operation.
Black wire—Connect (Switch output) to PLC Input Terminal or DC relay, or other lead.
Blue wire—Connect to DC source (–) (negative) to enable switch operation.

D1 — Protection diode
D2 — Surge suppressor (Surge absorbing diode)
D3 — Surge suppressor (Surge absorbing diode)
Tr — Output transistor

Example of wiring

Relay, example of wiring for resistant load, etc

Example of wiring with PLC

In the case COM terminal is

**Mounting and Piping**

**Caution**

1. Mounting orientation is available either horizontally or vertically.
2. Be sure to hold the main body when handling.
3. Do not drop or strike body. Excessive impact may damage the switch inside.
4. During installation or removal of the sensor, use a wrench on the Hex. width across flats for PT threads. For M5 thread, use it on the rectangular parts beneath the body. If force is applied to the top of the body or resin case, damage may be caused to internal parts of the switch.
5. Do not touch the LCD indicator face of the pressure switch during operation. Static electricity will cause malfunction or damage to the internal parts.

**Pressure Setting**

**Caution**

1. Pressure setting

While pressing SET, turn pressure-setting slotted screw “P.SET” (counterclockwise to decrease) and watch the LCD. When the LCD shows the correct figure, stop turning “P.SET” and release the SET button. Set pressure is displayed on the pressure display panel LCD. (Turning clockwise increases the pressure).

2. Alarm display

When line pressure drops to within 10% of established minimum allowable pressure, the LCD arrow indicator (on the front side) flashes to indicate the condition. When line pressure drops below the established minimum pressure the red alarm LED labeled ALM (on the front side) comes ON and is continuously illuminated while the low pressure condition exists.

3. Keep within the maximum operating pressure range. If more pressure than the maximum allowable operating pressure is applied, LCD displays “OF” and then it cannot be used. In that case, reset the pressure and the power source one more time.

**Operating Environment**

**Warning**

1. Do not use in locations where there is splashing or spraying of oils and solvents. Since this unit is open type, if water or oil, etc. make an ingress etc., the internal circuit may be corroded and result in a malfunction or damage.
2. Ground the piping when induction noise is expected to be generated from piping. When the noise is expected from power wire or high pressure wire, install the switch away from the noise.
3. Operating fluid is restricted to air and inert gas. Liquid cannot be used.
4. Absolutely never use in an atmosphere where explosive liquid or gases are used. Unit does not have explosion-proof construction. If used in an atmosphere of explosive gases, there is a possibility of causing an explosion.
